

What is Sandbox (SAND)?

The Sandbox is an Ethereum-based metaverse and gaming ecosystem where users can buy, play and monetize e.g. virtual land and characters and other assets.

The Sandbox experienced a push for virtual land for the first time with the Alpha Pass at the end of 2021. Big companies like Adidas and stars like Snoop Dog have invested in land here. Sandbox wants to create a whole new virtual world in which you can earn money through video games and e.g. renting out your virtual properties.

You can use the Game Maker to create assets in the form of NFTs and then trade them in your own marketplace or via large NFT marketplaces such as Opensea.

The coin issued by Sandbox is called SAND and is traded on various exchanges and is the currency in the Sandbox game. In 2021 it peaked at over \$8.60 - currently the coin is very weak and is trading at around \$2.20 as the beta version fell short of expectations.

With strong competition from other virtual worlds like “the otherside” with its Apecoin from Yugalabs (Bored Ape Yacht Club) we have to wait and see how sandbox and other play2earn games/ virtual worlds develop.

Symbol	SAND
Konsens Algorithmus	Proof of Stake
Founder	Arthur Madrid, Sébastien Borget
Publication	2012
Max support	3,000,000,000 SAND
Market Capitalisation	2,596,008,000 \$
ATH (25.11.2021)	\$8,40
Use Case	Token of The Sandbox
