

Products on crypto exchanges

As you know from your bank, crypto exchanges also have different products in which you can invest.

However, in the crypto space, new products are released almost weekly. Depending on the exchange, there are different numbers of products. In this video we would like to give you an overview of some product areas that are offered by crypto exchanges. You can then choose the products that are suitable for you.

1.Trading

You can buy, sell or forward cryptocurrencies on any exchange at any time!

2. Staking

You set your cryptocurrencies for a certain period of time

1,7,14 days or several months and get rewards (=interest)

3. Lending

You lend your cryptocurrencies to others (= lending) or you can borrow money (borrowing)

4. Liquidity mining

You put liquidity into the crypto exchange. This is mainly the case with decentralized exchanges.

5. Dual Investments (high risk)

Betting on rising falling courses with 2 cryptocurrencies!

6. Trading bots or copy trading

Here you can copy other traders or trade automatically. Caution is advised here, how successfully the bots trade is not listed. Promises of 100% and more returns should also be viewed with caution.

We present individual product areas in detail in the following videos.
