

142_Trading Orders: Market Order

What is a market order and how does it work?

"The market order is the simplest type of order.
But you have no influence on the purchase-sale price"

Your purchase is always executed immediately in real time.

Therefore, a market order means the following:
"Buy or sell immediately & regardless of the current price!"

You can remember that about the market order!

How do you place a market order now?

You can do this in just 3 steps:

STEP-by-STEP purchase instructions

Example: I want to buy Bitcoin for 357 USDT as soon as possible

Step 1: Click Market Order button

Step 2: Enter the purchase amount

Step 3: Click the buy button

You can then see in the order history that the purchase has been executed and the coin can be seen in your portfolio overview.

when do I use a market order?

If you want to buy immediately and the price at which you buy is secondary.
You have no influence on the price - but you bought the cryptocurrencies immediately.
