

Building wealth through one-time payments

In this video we use an example to show you how you can build your wealth through one-off payments.

Just as regular saving is a building block for wealth accumulation, you can supplement this with one-off payments

Before you make your investment, please think carefully about whether you can do without the money for the time being.

example

You want to make a one-time investment of 1000 US Dollar in the crypto market

As with regular savings, it makes sense to split this amount up. There is no minimum investment amount in the crypto sector.

For example, you can split your 1000 US Dollar as follows.

Invest 700 US Dollar in top 10 coins (cryptocurrencies with the largest market capitalization).

300 US Dollar in Trend Coins

On the one hand, you can spread your risk if you invest in several cryptocurrencies.

What can that look like now?

Deposit 700 US Dollar in Bitcoin, the largest cryptocurrency

Deposit 200 US Dollar in Polygon (MATIC): Trend / Potential Coin

Deposit 100 US Dollar in Tether USDT → stablecoin to buy later

→ Stake all coins for passive income earning. This is how you build up a passive income stream from this.
