

What is Bitcoin?

Bitcoin (BTC) is the world's first and largest cryptocurrency. Bitcoin is digital money, which like all cryptocurrencies is not regulated by a central bank.

Bitcoin is not unlimited. It is capped at a total of 21 million Bitcoin.

Who Invented Bitcoin?

Bitcoin was created in 2009 by Satoshi Nakamoto, an anonymous person or group. To this day it is not clear who is hiding behind the pseudonym.

Bitcoin and Blockchain

Bitcoin and blockchain are often mentioned together. Blockchain is the technology on which Bitcoin is based. There are many more blockchains outside of Bitcoin.

Creation of bitcoins

New Bitcoins are mined by solving cryptographic issues by miners. Through this process, the transactions are verified – This replaces the task of banks at fiat.

Bitcoins facts:
