

## ***Earn passive income with Liquidity Mining***

*With liquidity mining, you put money into the stock market - you often find opportunities to earn money passively on decentralized stock exchanges.*

*With liquidity mining, you usually provide cryptocurrencies in pairs so that these trading venues have sufficient liquidity and can in turn offer a trading function. In return, you receive a share of a liquidity pool that corresponds to the value of your contributed cryptocurrencies and, in return, you receive a distribution in the form of "rewards".*

*The advantages and disadvantages of liquidity mining can be found in the Wealth Building course!*

*The rewards in liquidity mining can be very high here, up to 100%, but also the risk of losing your money.*

*Features:*

- Different maturities: Often short-term, depending on the crypto exchange*
- It's worth making comparisons: there are different rewards on every exchange*
- Lightning-fast processing: The transaction took place in a matter of seconds*
- Special products: Various coins are promoted*

*Again, you should compare and check how much risk you want to take.*
