

## Building wealth through monthly investments

In this video we use an example to show you how you can build your wealth through monthly investments.

Please always remember that you only save money in the crypto sector that you do not depend on.

example

You want to save an amount of 100 US Dollar per month in the crypto market.

As in other investment areas, it makes sense to split this amount. There is no minimum investment amount in the crypto sector.

For example, you can split your 100 US Dollar as follows.

2 times 50 US Dollar or

1 x 50 US Dollar and 2 x 25 US Dollar or

4 times 25 US Dollar in different cryptocurrencies.

On the one hand, you can spread your risk if you invest in two to four cryptocurrencies every month.

What can that look like now?

You create monthly savings plans, for example

You save 50 US Dollar per month in Bitcoin – this is the largest cryptocurrency in the world

25 US Dollar in Ethereum, the second largest cryptocurrency

And 25 US dollar in Polygon (MATIC) - a coin with potential from the top 10 largest cryptocurrencies.

As soon as these are paid in, you can also put the contributions into staking. You can then repeat this every month. In addition to the chance of price gains, you also have regular income through rewards in staking.
