

## **Basics for your success with crypto investments**

When investing in cryptocurrencies, keep in mind the following basics that are important to your success:

1. Only invest money that you have left over.
2. Make your own decisions after doing research on the projects. There are too many scammers out there in the market
3. Long-term thinking - at least 5 years - similar to the stock market in which you invest with a 5-10 year investment horizon
4. Correct wallet strategy. Store multiple wallets and assets on hardware wallets. Always remember: not your keys, not your coins.
5. No emotional trading - here you just make mistakes and buy at the highest entry prices and sell at the lowest. Don't let that guide you. Think long-term here too.
6. Invest regularly: This helps to compensate for price fluctuations and you can use the cost-average effect for yourself
