How to sell an NFT on opensea

After you learned how to buy an NFT in the previous video, we will now show you how to sell an NFT and transfer the money back to your checking account - step by step using the NFT platform opensea (www.opensea.io) as an example.

1. Log into your opensea account
2. Go to your profile and select the NFT you want to sell
3. Click on the NFT and a new window will open where you can only see this NFT
4. Click on "Sell"
5. A new window will open where you can enter your selling price (either fixed price or as an auction) and the term (e.g. 1 day, 1 week, 1 month). The fees (creator fee e.g. 5% and service fee 2.5%) are displayed. If that fits, then click on Complete Listing.
6. Now MetaMask opens and shows you the gas prices. If they match, you can click on sign at MetaMask
7. You will see that your NFT is listed.
8. As soon as someone buys your NFT, you will receive an email notification
9. You can then no longer see the NFT in your opensea account and the amount has been credited to your MetaMask account.
10. If necessary, you can then transfer the amount from your MetaMask account back to your crypto exchange Coinbase, for example, and from there to your checking account.

Always make sure that you transfer your funds to the correct wallet addresses, otherwise your funds will be lost.
